ANNEX 1. IOM Common Pipeline Access Guidelines

The IOM Pipeline Program is a central repository of Shelter and WASH NFI supplies that are managed by International Organization for Migration (IOM). IOM is in-charge of procuring, prepositioning, and storing Shelter and WASH NFI supplies. The distribution to the affected population is responsibility of the S/NFI and/or WASH Cluster's partners, which access the pipeline supplies after the endorsement of each Cluster Coordination Team. In order to be eligible to access the IOM pipeline, partners have to sign the Distribution Agreement with IOM.

The following points are listed to provide clear guidelines on how to access IOM pipeline supplies and the reporting requirement.

Step 1. Pipeline Distribution Agreement

- A Pipeline Agreement will be signed between IOM as the Pipeline Agency and S/NFI and/or WASH Cluster's partners. The Agreement specifies the roles that IOM and partners will have in the Common Pipeline Program in South Sudan. This is a "**No Fee**" basis agreement and signed for agreed specific timeframe. It does not guarantee that IOM will release the listed items to the partner.
- Partners are required to submit *Common Pipeline Request Forms*, along with supporting assessment reports, to either S/NFI or WASH Cluster Coordination Team for review and approval. IOM will only release supplies based on:
    i. Cluster's endorsement of submitted requests; and
    ii. Availability of supplies in IOM stock.
- Partners are also required to secure *separate funding* for their program activities including the transportation of supplies from IOM to response locations, securing and insuring supplies from any risk of theft, looting and /or other incidents which may results in loss of transported supplies, and distribution of supplies to the beneficiaries.

Step 2 and 3 are to explain the process of requesting supplies from IOM Pipeline stock.

Step 2. Request, Submission, and Endorsement.

- Partners, in coordination with the S/NFI and/or WASH Cluster, conduct assessment and verification exercise, in which the contextual and social vulnerability, logistical access, protection principles, etc. are assessed. After the assessment, Partners submit *detailed Assessment Report* detailing the needs for S/NFI and/or WASH Cluster Coordination Team's review and verification.
- Once the needs are verified, Partners will have to submit the duly completed *Common Pipeline Request Form* to each respective Cluster Coordination Team. Partners may find the latest update of the availability of supplies in the IOM common pipeline online stock updates and the latest Pipeline Request Form from the Cluster website.

- Ensure all the mandatory required information is filled, including the partner's contact information, response location, type and quantity of items and brief justification for the request. Please submit the request through emailing the Cluster Coordination Team at scsouthsudan-pipeline@googlegroups.com for S/NFI pipeline and corepipeline@gmail.com for WASH pipeline and copying IOM Pipeline Unit at email address: isswp@iom.int.
- IOM Pipeline unit will review the requests along with Cluster Coordination Team. IOM Pipeline will provide inputs to each requests, and to ensure all the requirement is completed and no duplication in term of response locations and beneficiaries.

Step 3. Supplies Release and Transportation

In relation to Article 4 of the Agreement, IOM Pipeline will transport the supplies to all IOM key-hubs location in South Sudan. When security situation allows, IOM Pipeline may also transport shelter/NFI supplies from IOM key-hubs to response location. Some of the transportation process will also be coordinated with Logistics Cluster. Partners are required to coordinate the process, including the response schedule with both IOM and Logistics Cluster.

WASH Cluster' partners who received supplies from common pipeline managed by IOM are responsible for the collection of supplies from IOM logistic base/warehouses, and transporting the supplies to the response locations:

- Partners should inform the collection schedule at least 1 (one) day in advance before the collection day.
- IOM Pipeline will coordinate with IOM warehouse unit to prepare the release of supplies on the collection day.
- Partners to organize the transportation to collect the supplies from IOM warehouse on the agreed collection schedule. Partners to transport the supplies to response locations, and ensure the supplies are secured during the transportation process.

For both S/NFI and WASH Clusters' partners, the following points also applied:

- Partners' staff should check the condition of supplies received in IOM warehouse and sign IOM waybill/release notes.
- IOM will provide one copy of the waybill and packing list to partners as their record.
- Partners to secure all supplies received from IOM, including during the distribution process, until all supplies are distributed to the beneficiaries.
- Partners are required to keep all record of the distribution of supplies and will provide the records to IOM Pipeline when requested.
- Partners are required to report any loss or damaged items as soon as possible in writing to IOM pipeline unit. If the loss of items is caused by civil disorder, military action, natural disaster and other circumstances which are beyond the control of Implementing Partner, please submit the Loss/Damage Item form to Respective Cluster Coordination Team and IOM pipeline unit.

Step 4 is to describe the mandatory requirement from partners accessing IOM pipeline supplies.

Step 4. Training and Mandatory Reporting

Aside from the assessment reports, needs verification process and pipeline requests forms, distribution reports, training and/or technical assistance, and post distribution monitoring (PDM) are the accountability mechanism for the common pipeline program in South Sudan.

- Partners are required to provide necessary training and/or technical assistance on the utilization of pipeline supplies to the beneficiaries.
- The training and/or technical assistance activities have to be documented accordingly and included in the distribution report.
- Partners are required to submit detailed distribution report, which include the process of training /technical assistance process, to respective Cluster and IOM Pipeline unit.
- The distribution report has to be submitted within 15 (fifteen) days for S/NFI partners and 1 (one) month for WASH partners after the response/distribution process is completed.
- Partners are also required to update the Cluster's 5W.
- Partners are requested to participate in the Cluster/Pipeline agency-led needs assessment/PDM exercise.
